Pizza Station: Analytics Summary

Web Data Analysis course, Umm Al-Qura University, 2nd semester 1447H. Data from Google Analytics 4 (GA4), collected over about 3 weeks starting April 26, 2026.

1. Main numbers

Metric	Value
Users	45 (all new)
Sessions	72
Page views	388
Events	1,245
Engagement rate	65.28%
Average engagement time	1 min 46 sec
Traffic source	100% direct

2. Traffic over time

Visits jumped on April 26, the day we shared the link with classmates (about 30 sessions that day). After that, visits went down slowly. This makes sense: only our class knew about the site, and nobody found it through Google.

3. Pages

Page	Views	Avg. time	Bounce rate
Home	93	15 sec	22.6%
Reservation	69	54 sec	2.9%
My Reservations	56	39 sec	5.3%
Menu	50	25 sec	8.0%
Booking confirmed	45	11 sec	12.9%
Contact	33	46 sec	0.0%
About	24	14 sec	0.0%

- The **Reservation** page did best: people stayed the longest (54 sec) and almost nobody left right away (2.9%).
- The **Home** page had the highest bounce rate (22.6%), so it is the first page to improve.

4. Visitors

- **Country:** 100% Saudi Arabia. Jeddah had the most visits (about half), because most of our class lives there.
- **Device:** 87% mobile (39 of 45 users). 73% used Safari, so most were on iPhones.
- **Mobile vs desktop:** desktop users stayed much longer (5 min 27 sec vs 1 min 18 sec on mobile).
- **Language:** about 67% used Arabic and 33% English.
- **Forms:** 76 forms were sent (reservations and contact messages).

5. What we learned

1. Most people use their phone, so the mobile design matters most.
2. Booking a table is the feature people used the most.
3. The site is only reached by direct links, so it cannot grow on its own.

6. Recommendations

1. **Mobile first:** bigger buttons and faster loading on phones.
2. **SEO:** add page titles and descriptions so Google can find the site.
3. **Google Search Console:** connect it to see how the site appears in search.
4. **Social media:** share the link on Instagram and Snapchat, and add social icons to the site.
5. **Home page:** add a clear offer or photo to keep visitors from leaving.
6. **Both languages:** make sure every page is fully translated.
7. **Reminders:** send a booking confirmation or reminder to bring people back (each user came only 1.6 times on average).
